

## HOW TO ACTIVATE OR INACTIVATE THE SERVICE?

On the main page you will find an area called Personal Area. Here you have to type in your login and password and click on enter.

This way you will start your session. You will see the following window and on the right menu choose "Client's Area" and then "Status".

On this window, the current state of your service will be shown, that may be: Active or Inactive.

Hence if it is active, there will be the option to inactivate it and vice versa.

State from which date you wish the service to become active or inactive and click on Apply.

After this, a register of all passed activation and inactivation requests will be shown, that you have carried out through the website in the described way. It does not include the activations and inactivations requested to Global Interlink Telecom.
